

Erratum to

Processes on Unimodular Random Networks

Electron. J. Probab. **12**, Paper 54 (2007), 1454–1508.

by DAVID ALDOUS AND RUSSELL LYONS

Formula (4.4) of Proposition 4.9 is incorrect. The correct formula is

$$1 - \frac{2}{\deg(\mu)}.$$

This makes the last sentence of Proposition 4.9 obvious. The proof used stationarity of simple random walk, but mistakenly used μ as the stationary measure. Instead, of course, it is the degree-biased measure, ν . Formula (4.4) with ν in place of μ results, which then simplifies to the above.

The proof of Proposition 4.10 has a slight error; when $1/\epsilon$ occurs, it should be ϵ .
